

CRYSTAL CLEAR

SUPER HIGH GLOSS CONCRETE CURING AND SEALING COMPOUND

Now there is a way to ensure that your decorative or pigmented concrete is properly cured and sealed with a product that is **proven** to have long lasting, high gloss sealer protection.

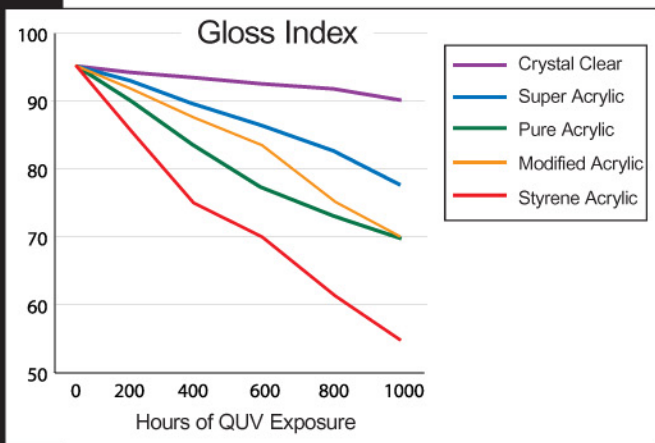

Presenting **CRYSTAL CLEAR**.
 "The Clear Choice"

CRYSTAL CLEAR is a blend of specialty materials designed to provide the maximum protection and the maximum high gloss appearance possible. **CRYSTAL CLEAR** is specifically developed to enhance the beauty and color of decorative & pigmented concrete – long term. The gloss and clarity developed by **CRYSTAL CLEAR** is proven to outlast that of other concrete sealers.

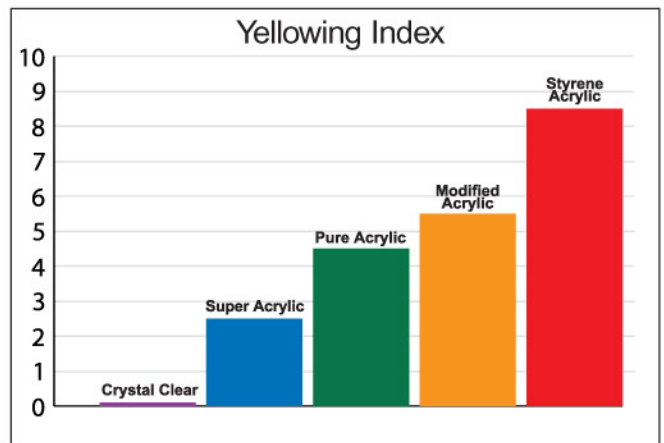

Most concrete sealers develop fair-to-good gloss when first applied.

After a relatively short time, the gloss on other sealers begins to deteriorate – particularly on exterior concrete. UV exposure, de-icing chemicals and abrasion quickly breaks down even the most expensive acrylic sealers.

CRYSTAL CLEAR'S unique formula has undergone a battery of laboratory and field tests against the best acrylic sealers on the market. In long-term weathering tests, **CRYSTAL CLEAR** is proven that it can out-last and out-gloss even the best "super" acrylic sealers.

After 1,000 hours of QUV exposure, CRYSTAL CLEAR still has over 95% of its original high gloss. The best of the other sealers tested only held 83% of its original gloss.

Tests have demonstrated that even acrylic sealers marketed as "non-yellowing" will discolor if subjected to 1,000 hours of QUV testing. This level of testing for yellowing is the equivalent to exposure to Florida sun for over 5 years. CRYSTAL CLEAR continues to be perfectly clear after this test.

Discoloration is visible at a yellowing index as low as 2.0

CRYSTAL CLEAR

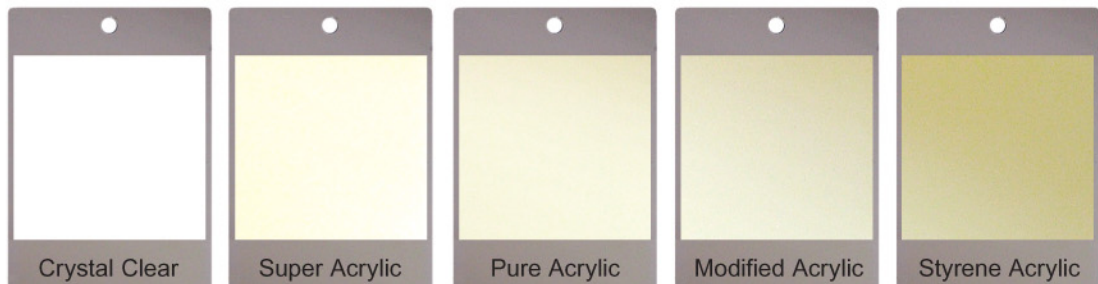

SUPER HIGH GLOSS CONCRETE CURING AND SEALING COMPOUND

CRYSTAL CLEAR may be applied to fresh concrete to cure and seal the concrete. CRYSTAL CLEAR develops a tough curing film that meets the requirements of ASTM C309 & ASTM C1315. Meeting these standards allows the concrete to reach its full design strength with minimal shrinkage cracking.

The special additives in CRYSTAL CLEAR develop a superior gloss that enhances the beauty of decorative concrete. The patent pending materials in CRYSTAL CLEAR are **proven** to maintain gloss and clarity on concrete much longer than other sealers used for decorative concrete.

The tough CRYSTAL CLEAR film protects the concrete while it beautifies. CRYSTAL CLEAR has better resistance to abrasion and deicing chemicals to better protect your concrete investment.

White panels after 1000 hours of QUV testing

HIGHLIGHTS OF CRYSTAL CLEAR

- Meets the standards of ASTM C1315 & ASTM C309 to effectively cure the concrete
- Forms a tough, long-lasting film to protect the concrete
- Creates a very high gloss finish to enhance the beauty of pigmented or decorative concrete
- Maintains its gloss level long after other sealers have lost theirs
- Will not ever discolor due to environmental exposure
